### Boat transfer

- Assessing the risk
- Personal protective equipment
- Access and egress methods
- Principles of sea survival
- Casualty recovery
- Man over board procedures

## Safety training for wind energy

**More and more companies providing services to offshore wind farms have realized the need for health and safety training specially adapted to this environment.**

Falck Nutec have been an active part of the wind industry right from the beginning and we now have 15 years of experience providing safety training for the wind industry.

Our training courses are created in close cooperation with the wind turbine industry, and provides the realistic and critical training needed to prevent accidents.

Our courses consist of a selection of training disciplines which can be put together according to your needs. The training disciplines are divided into basic and specialist courses, but can be interchanged to fit your needs.

For more information on our course offerings please visit our websites or call our training centres directly. Please find contact information on the back page.
